

The printer that you choose is very important, as it must accurately and consistently print Seals, Lids and Charts for your patients. Here are some printers that we would recommend for you, as they have been tried and tested with our system.

- **Epson EcoTank 5800**

This printer has an ultra-low cost per page, and although it is the most expensive initially, it will save money in the long term due to its large ink tanks, and low ink costs. It also has a large paper capacity of 500 sheets.

- **Epson WF C5210**

This printer is fast. Its FPOT (first print out time) is 5.3 seconds for a colour page, which is considerably faster than other comparable printers. It has a paper capacity of 330 sheets.

- **Epson WF 4745DTWF**

This printer is also fast. It can deliver up to 30 colour pages per minute, and it also has the option for scanning, faxing, and copying. This would be a good choice if you need these extra functions.

Any of these 3 printers feature a touch screen for ease of use, and have low power consumption. All you will need to do is set them up so that they can print A4, and then give us a call and we will sort the rest.
